

# File Team, Inc.

Delaware Corporation File Number 7063545

<https://fileteam.com>

## A Statement on Security

The fileteam.com connection is encrypted before being transmitted over a secure connection. The security certificate is provided by Go Daddy, Inc. The common name for the certificate is Go Daddy Secure Certificate – G2. Additional Security Certificate information is available by clicking on the “lock” icon to the left <https://fileteam.com> in the URL. The security measures at File Team follow or exceed the current Standard of Practice.

### On security of individual links

---

- \* Each link uses a cryptographically secure 20-character base 62 random number.
- \* The data displayed to the users is drawn from an SQLite database file that is used only for that specific briefcase link. The briefcase datalinks are immune to the sorts of complex ACL vulnerabilities that plague even the major companies.
- \* Changes made to your file meta data after the creation of the briefcase are stored separately than the briefcase data.

### On separation of briefcase data from main site

---

- \* Each briefcase is stored as an SQLite database file.
- \* Briefcase shared data is not served from the main database. Instead for maximum security the data is queried from a limited snapshot stored in an SQLite database file.
- \* This ensures that there are no complex permission schemes which could fail, exposing the larger collection of your files and data.
